

**CONCLUSION**

The community assistance course is one of the practical application course which must be taken by the undergraduate university student at sixth-semester stage. It is essential for the student and the lecturer to use the project based learning approach to solve the community environmental problem based on the fundamental theoretical knowledge that they have. Based on the pyrolysis implementation project, we briefly summarized that from forty-eight students, 95.83% was acquired very good (A) final grade while the other 4.17% was acquired good (B) grade. The project granted a valuable event to the students for applying their knowledge to contribute and solve the real problem at the society. This effort could be benefit for the student to face the real world challenge before they graduate from undergraduate university.
